ID	Use Case	Actors	Use Case Description
UC-AUTH-01	Register-tenant	Store Owner	Create a new store tenant with a `TenantId` to isolate data, and initialize a default branch.
UC-AUTH-02	Login	All Actors	Authenticate users via email/phone number and hashed passwords, issue JWT session tokens, and support secure logout.
UC-AUTH-03	Manage-users-and-roles	Store Owner	Create staff accounts and assign roles (Owner, Staff, Cashier) based on the RBAC (Role-Based Access Control) model within the scope of the subscription.
UC-AUTH-04	Manage-branches	Store Owner	Manage information, warehouse configurations, and operational status for branches under the subscription
UC-PROD-01	Manage-categories	Staff, Store Owner	Manage hierarchical product categories (parent-child) and lists of brands
UC-PROD-02	Manage-products	Staff, Store Owner	Manage simple product information or combinations that generate variants (Color, Size)
UC-PROD-03	Manage-skus	Staff, Store Owner	Generate and manage unique SKUs for each variant within the same subscription
UC-PROD-04	Manage-barcodes	Staff, Store Owner	Assign POS barcodes and set retail/wholesale prices completely independently of the Cost of Goods Sold (COGS).
UC-INV-01	Create-goods-receipt	Warehouse Staff	Create a stock receipt, increase `on_hand` quantity, automatically calculate the new Weighted Average Cost (WAC), and record entries in an append-only general ledger.
UC-INV-02	Transfer-stock	Warehouse S	Two-step inventory transfer

			between branches A and B (Dispatch from source warehouse → Confirmation at destination warehouse)
UC-INV-03	Perform-stocktake	Inventory Auditor	Perform a physical inventory, reconcile against software balances, and issue adjusting journal entries to the general ledger.
UC-INV-04	View-inventory-ledger	Staff, Store Owner	Querying the append-only inventory transaction log (`InventoryTransaction`) for audit purposes
UC-ORD-01	Ingest-order	Marketplace Webhook, POS, Admin	Receive, perform idempotency checks, and normalize omnichannel orders into a Canonical Order Model.
UC-ORD-02	Reserve-stock	Order System	Implement a pessimistic locking mechanism to prevent overselling; increment `reserved` when sufficient `available` stock exists.
UC-ORD-03	Confirm-order	Order Staff	Process the order, capture the current COGS WAC into `OrderItem.CostPrice`, decrement `on_hand`, reduce `reserved`, and record the inventory outflow in the general ledger.
UC-ORD-04	Cancel-order	Order Staff, Hangfire Worker	Cancel the order and decrease the `reserved` quantity to return the held stock to the `available` pool.
UC-POS-01	Create-pos-sale	POS Cashier	Search for SKUs via barcode or name, and instantly verify that stock is available (`available > 0`) before selecting an item for sale.
UC-POS-02	Process-payment	POS Cashier	Execute the Reserve → Confirm → Deduct sequence within an atomic database transaction during payment.
UC-POS-03	Print-receipt	POS Cashier	Automatically trigger the Browser Print API to print retail receipts immediately

			after a successful POS payment.

UC-REP-01	View-sales-report	Store Owner, Manager	Analyze Net Revenue, Total COGS (from snapshot), and Gross Profit by time period, branch, and SKU.
UC-SIM-01	Simulate-webhook	Dev, Tester	Simulate multi-channel Webhook firing for load testing and real-time SignalR notification delivery
